

Modular measurement meter

Function

The **DIRIS A10** is a multifunction meter for measuring electrical values in low voltage networks in modular format. It allows all electrical parameters to be displayed and the measurement, energy metering and communication functions to be used. In addition, the DIRIS A10 has a function for correcting errors in CT connections. It also allow variations in temperature to be detected thanks to its internal temperature measurement function.

➔ Connection

Low voltage balanced network

Recommendation:

- For IT earthing systems, it is recommended that the CT secondaries are not earthed.
- While disconnecting the DIRIS, the secondaries of each current transformer must be short-circuited. This operation can be carried out automatically from a product in the SOCOMEC catalogue, PTI: Please consult us.
- It is recommended that the earthing point for the DIRIS A10 and the current transformer secondaries must not be earthed at the same time.

Connection - Low voltage unbalanced network

3/4 wires with 3 CTs

3 wires with 2 CTs

Use of 2 CTs reduces by 0.5 % the accuracy of the phase, whose current is worked out by vector calculation.
